

## FOLDING STACKING BASKETS STKK (stacking feet made of closed channel bar)

Baskets are mainly intended for storage and loose display of fast-rotating goods In stores and supermarkets.

**Possible use of baskets:**

- setting on the racks shelf
- stacking baskets one on another

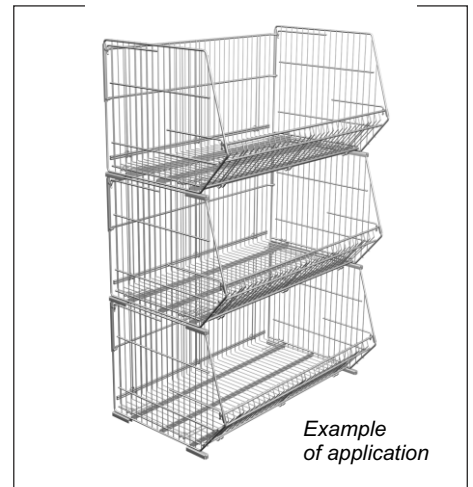

Its small dimensions after folding means that when a basket is not being used, it doesn't take up warehouse space.

**Standard finish:** zinc plated + lacquer .

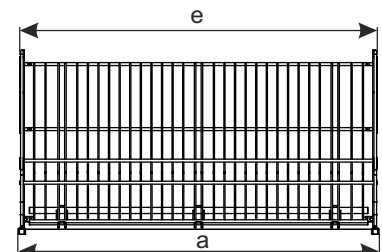

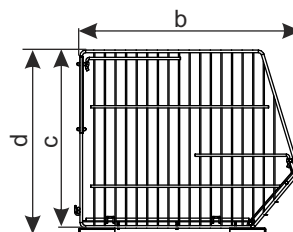

**Technical data:** The structure of basket made of spot welded wire. The bottom is reinforced with flat irons against deformation under heavy loads. Stacking feet made of channel bar with closed ends to protect against displacement of stacked baskets.

**Maximum loading:**

(with equable spreading of the goods):  
single basket - 100 kg,  
3 stacked baskets - 100kg/50kg/50 kg.
